

Because *everyone* should come with captions.

XanderGlasses are a simple wearable assistive technology device that help people with hearing challenges understand speech in real time.

Using Sight for Sound

XanderGlasses are comfortable smart glasses that translate speech to text in real-time, displaying accurate captions of conversations. XanderGlasses use sensory substitution—"sight for sound"—and AR (augmented reality) to enhance daily communication for individuals, families, and organizations affected by hearing loss.

A Simple Solution

XanderGlasses work like a simple on/off appliance: press the "on" button and the glasses begin to work. Tiny microphones embedded into the frames listen while the glasses transcribe speech into text, then project captions of conversations in the wearer's field of vision in real-time. Only the wearer can see the captions. They resemble speech bubbles integrated into the wearer's field of view.

Technical Details

- Dual noise-canceling microphones capture speech
- High accuracy captions in real-time
- Stand-alone, offline operation—for use anywhere
- Speech-to-text technology built into the glasses; no need to rely on a smartphone
- Customizable caption display
- 26 languages available offline
- Private and secure: audio and captions are not stored
- Wearable, wireless, discreet, and comfortable
- Provides 2.5 hours of continual usage; recharges via USB-C
- Option to insert prescription lenses for distance vision
- Wireless remote mic system for extra help in noise

Reactions from People Who Use XanderGlasses

"The simple task of putting the glasses on changed my quality of life. When I was in a group setting and people were talking, I would just kind of fade to black because I wasn't getting what the conversation was. I wasn't even understanding what the topic was. I'd start off into my own mind. But wearing the glasses it's like, 'Wow I'm here.'"

— James R.

"XanderGlasses work so much better than what I tried before and even transcription apps. I am now able to completely understand my wife. The text is clear and displays in real time with no delay."

— Ken S.

"I lost my hearing due to a rare disease. Xander glasses help me tremendously to talk to someone who wants to communicate with me. I feel like I can hear again with them on, rather than have a phone up to someone's face to get what they're saying (I can't sign). The glasses make me feel confident and comfortable and happy."

— Omeir A.

"This is every hard of hearing person's dream. To be able to see what's being said in real time."

— Barbara J.

Pricing & Warranty

Pricing for individuals: \$4,999/unit, includes: XanderGlasses, remote wireless mic system, carrying case, comfort cord, sunglass clip-ons, power brick & USB-C charging cable, lens cleaning cloth. **50% discount for assistive technology or non-profit lending libraries.**

Warranty: For 12 months from purchase, Xander will repair or replace any device that fails to meet specifications, except for devices that have been mishandled, misused, or damaged outside of normal operation.

We are an empathetic company of audio experts, engineers, and researchers on a mission to help people with hearing loss better understand sounds and speech. We leverage the sense of sight to augment sound and bring people together.
